

**Mazaher Koruzhde, Ph.D.**, is an Assistant Professor of International Relations at Howard University's College of Arts & Sciences, where he teaches courses in international political economy, American foreign policy, and security studies. Koruzhde earned his Ph.D. in International Relations from Florida International University in 2022, where his dissertation examined the role of transnational investment blocs in shaping U.S.–Persian Gulf relations and U.S. policy toward Iran. He also holds an M.A. in International Studies from Florida International University and an M.A. in International Relations from the University of Tehran, bringing a broad and comparative perspective to his work in global politics.

Koruzhde's research explores the intersections of corporate power, security policy, and U.S. foreign affairs, with a particular focus on the political economy of sanctions and geopolitics in the Middle East. He has published peer-reviewed journal articles and book chapters investigating topics such as the transnational investment bloc's influence on militarization in the Persian Gulf and the implications of shifting U.S. foreign policy frameworks. His scholarship also includes rigorous analyses of how global economic structures shape strategic decision-making and state behavior, contributing to academic debates in international political economy and security studies.

In addition to his academic appointments, Koruzhde is active in the broader scholarly community, presenting his research at major conferences such as the Midwest Political Science Association and the International Studies Association. His work has been supported by fellowships, travel awards, and research grants, reflecting his commitment to advancing understanding of complex global systems through both qualitative and quantitative methodologies. At Howard University, he is deeply engaged in mentoring students and fostering critical inquiry into international relations, preparing the next generation of scholars and practitioners to navigate an increasingly interconnected world.
